

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

contain respectively comments on such occurrences during the year as seem of special interest, and the observations received from the Faroes.

The paper ends with a map, showing the locations of about eighty Danish lights. — GERRIT S. MILLER, JR.

Lane's Field-Notes on the Birds of Chili.¹ — Students of South American birds should be grateful to Dr. Sclater for publishing the valuable series of notes constituting this paper. Mr. Lane was sent to Chili by the late Mr. H. B. James to gather material which, in connection with his own observations, was to be used in a proposed work on Chilean birds.² Lane was in the field from November, 1889, to December, 1890, during which time he made collections and observations near Santiago, in the Province of Tarapacá, in northern Chili, and in the Provinces of Arauco and Valdivia and the Island of Chiloe in southern Chili. The notes here given by Dr. Sclater from Lane's journals relate to 124 species and are of exceptional interest. They were evidently written by a keen, appreciative observer, and he gives us well-drawn character sketches of birds concerning whose life histories we previously had very little reliable information. Often a page or more is devoted to a description of the habits and haunts of a single species and there are particularly satisfactory accounts of such representative Chilean species as members of the genera *Phytotoma*, *Pteroptochus*, *Hylactes*, *Thinocorus*, *Nothoprocta* and others. — F. M. C.

Richmond on Madagascan Birds.³ — As a result of a few months' collecting (February to July, 1895) in Madagascar, mainly on the east coast, Dr. Abbott has forwarded to the U. S. National Museum 217 specimens of birds. These are referred by Dr. Richmond to 83 species, one of which, *Ægialitis thoracica*, he has before described,⁴ while two others, *Thalassornis insularis* and *Copsychus inexpectatus*, are here for the first time described as new. — F. M. C.

An Ohio Grackle Roost.⁵ — This paper contains the results of one season's work, from the arrival of the Grackles on March 9 to their
